– 1
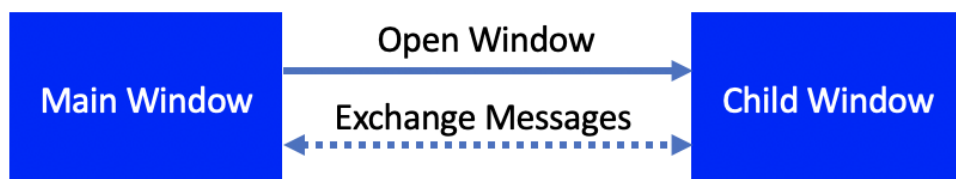

Mission 1: This is to fully understand how electron framework is providing by creating 2 pages and send data across page.

Tasks:

1. Go to https://electronjs.org/
2. Checkout the sample application
3. Start your coding here to create **Q&A app**
    a. This app will create the main window with list of questions (you can add mock data)
    b. When click on any one of question, it creates child window to show the answer
    c. if the child window is opened, it just refresh the answer in child window.

4. You can create your own git repo for this task

1. Just create a personal project in https://git.sami.int.thomsonreuters.com/

Key takeaways

- Understand how data is exchanged
- Understand Electron framework features
